Tobacco: World Markets and Trade

Global Leaf Supply Down in 2002 (Metric Tons)

World unmanufactured tobacco supply is projected to decline nearly 14 percent as many countries cut leaf output in an effort to bring supplies more in line with consumption. China and the United States combined account for over 50 percent of the world's leaf stocks. China's leaf stocks, which grew markedly in the 1990's, are expected to decline nearly 32 percent in 2002 as government reforms designed to improve leaf quality take affect. U.S. stocks have been trending lower in recent years as manufactures have drawn down foreign leaf stocks. For 2002, U.S. stock levels are expected to decline further although greater imports are expected.

WORLD DEVELOPMENTS

Highlights:

Argentina: Argentine total leaf production for 2002 is expected to reach a record level, totaling 127,500 metric tons, up nearly 30 percent from the previous year. Much of this increase is due to an additional 5,500 hectares of tobacco being planted along with favorable weather conditions. Flue-cured production in 2002 is estimated to total 71,700 tons, compared to 54,400 tons in 2001. Flue-cured and burley leaf exports combined account for 93 percent of Argentine leaf exports, and are estimated up 1 percent and 15 percent, respectively, from the previous year. The leading export markets for Argentine leaf are Paraguay, the United States, and the European Union. Argentine leaf prices are not expected to decrease significantly in 2002 despite the devaluation in the peso. AR2030

Bulgaria: Bulgarian leaf production is likely to increase for all types due in part to financial incentives giving the industry by the government. Total leaf production for 2002 is forecast at 50,210 tons, up nearly 23 percent from 2001. Total leaf imports are forecast to decline by 14 percent in 2002, although the domestic cigarette industry is still expected to buy most of its needed higher quality flue-cured and burley tobaccos from foreign sources. Despite an improvement in local leaf quality, domestic stocks of lower quality leaf will likely increase in 2002, and push total leaf stocks to 30,809 tons. BU2008

Egypt: Total leaf imports in 2002 are projected at 57,500 tons, up about 2 percent from 2001. Although Egypt prefers American tobacco because of its high quality and flavor, its high price makes it prohibitively expensive for the Egyptian market. The Egyptian leaf market has long been considered very price sensitive. The leading sources of Egyptian leaf imports in 2001 were Malawi and China. EG2011

Germany: German cigarette production is forecast at 218 billion pieces in 2002, up 2 percent from the previous year. Much of this increase is due to a rise in cigarette sales to the Spanish and Italian markets. For 2002, cigarette exports are expected to increase by nearly 4 percent over 2001. GM 2007

Italy: Leaf production for 2002 is forecast to remain within the European Union's tobacco quota for Italy and reach 130,400 tons, unchanged from 2001. Area planted to leaf is expected to increase slightly. Italian leaf exports are forecast to decline about 4 percent from last year. The leading export markets for Italy are the European Union, Eastern Europe, and the United States. IT2007

Korea: The Korean Tobacco and Ginseng Corporation ended their monopoly control in 2001 and have begun contracting for leaf based on volume rather than area planted. Total leaf production is forecast to drop about 6 percent because of this change. Korean cigarette manufacturers have also begun streamlining the industry in an effort to regain market share lost to foreign brands. Consumer preference for cigarettes has shifted toward higher quality foreign brands in recent years. KS2019

Malaysia: As the Malaysian economy improves, the demand for American-style cigarettes is expected to grow. Cigarette production in 2002 is forecast to rise by 10 percent from last year. Ample domestic leaf production is expected to dampen the demand for foreign leaf. Domestic leaf production in 2002 is estimated at 10,520 tons, up 12 percent from the previous year. Leaf imports in 2002 are forecast to drop nearly 25 percent. MY2023

Russia: Cigarette production is expected to exceed domestic demand for the third consecutive year and reach 375 billion pieces compared to 374 billion pieces in 2001. High cigarette stocks are expected to help boost cigarette exports in 2002 to nearly 5 billion pieces, up 56 percent from the previous year. Major export markets for Russia include the Ukraine and Belarus. RS2014

South Africa: South African leaf production for 2002 is forecast to return to normal levels after last year's bumper crop. Total leaf production for 2002 is estimated at 29,950 tons, down 13 percent from 2001, and is reflective of the downward trend being seen for cigarettes. South Africa's leaf exports are forecast to decline nearly 19 percent and reach 15,000 tons. SF2012

Spain: Cigarette sales continue to climb and are expected to reach a record level in 2002. Much of this growth is on account of a strong tourist market along with lower retail price compared to other European countries. Cigarette sales are estimated to reach 94 billion pieces in 2002. Despite an expected marginal increase in sales, cigarette production is expected to fall by 6 percent this year. The decline in output is due to a 15-percent increase in foreign sales of American-blend cigarettes. Consumer demand has shifted from traditional dark cigarettes to American-blended cigarettes. SP2015

Taiwan: The Taiwan Tobacco and Wine Board's tobacco (TTWB) monopoly was dismantled in January 2002. The Board will be incorporated in 2002 and privatized by July 2005. As a private company, TTWB will no longer subsidize domestic production and will be cutting production each year until all domestic production has been phased out. Imported leaf will then account for all domestic demand. For 2002, leaf production declined 12 percent. TW2020

United Kingdom: For 2002, cigarette production is expected to remain relatively constant at 126 billion pieces. Sources forecast that production may show some improvement as economic conditions in the UK's Far Eastern markets improves. Cigarette exports are estimated to increase to 102 billion pieces in 2002. However, the long-term trend in the UK has been for a declining domestic market and lower exports. UK2009

World Auction Updates:

Zimbabwe Tobacco Auction Update: Zimbabwe's Tobacco Marketing Board reports that 12.07 million kilograms of flue-cured tobacco were sold after four weeks of the auction season for an average price of U.S.\$1.82 per kilogram. This is down 400,000 kg from the same period last season. Average prices are up by 7 percent from the same period a year ago.

U.S. DEVELOPMENTS

Highlights:

USDA Announces Importer Assessment Rates for Flue-Cured Tobacco: USDA announced assessment rates effective July 2, 2002 on unmanufactured flue-cured tobacco imported for consumption of five cents per pound. The assessment rates are the same for domestically-produced flue-cured tobacco and will remain in effect through June 30, 2002. PR1555.02

USDA Announces 2002 Marketing Year Penalty Rates for Excess Tobacco: USDA announced the penalty rates that will be charged producers, dealers, and warehouse operators for marketing excess tobacco during the 2002 marketing year. PR1548.02

CONVERSION FACTORS

1 Metric Ton	=	2,204.622 Pounds
1 Pound	=	0.0004536 Metric Tons
1 Kilogram	=	2.2046 Pounds
1 Pound	=	0.4535924 Kilograms
1 Hectare	=	2.471 Acres
1 Acre	=	0.4047 Hectares
Dry Weight (DW)	=	88 to 92 percent of Farm Sales Weight (FSW) 1/

1/ Unmanufactured tobacco's conversion from dry weight to farm sales weight varies depending on a country's cultivation and processing conditions and practices. The average conversion factor ranges from 88 to 92 percent, but it can be as low as 60 percent.

Thailand	7,000	2,332	33.3%
Zimbabwe	12,000	4,221	35.2%
Residual 2/	3,000	3,000	100.0%
Total	150,700	88,351	58.6%

1/ U.S. Tariff Schedule line items subject to the tariff-rate quota (TRQ) include flue-cured and light air-cured tobacco, including burley, which are used in the manufacture of cigarettes for consumption in the United States.

2/ A TRQ of 3,000 metric tons is available to all countries, other than the 9 designated quota recipient countries, and is allocated on a first- come/first- served basis.

NOTE: The TRQ is administered on a September 13 - September 12 trade year.

June 2002

SPECIAL REPORT

World Unmanufactured Tobacco Production, Supply and Distribution

Production

Nearly three-fourths of the world's leaf tobacco production is grown in China, the United States, India, Brazil, Indonesia, and Greece. For 2002, global leaf output is forecast to fall marginally as a result of a downturn in cigarette use in much of the developed world.

China is by far the world's leading leaf producing nation accounting for one-third of the world's leaf crop. In recent years, China has become more focused on improving leaf quality and lowering domestic stock levels. China's revised marketing policies pushed procurement prices lower for poorer quality tobaccos by 47 percent in 2002, while prices for higher quality leaf are expected to fall only marginally. China's leaf output is further controlled by the local governments' strictly enforcement of leaf quotas. Leaf production fell by nearly 8 percent in 2001, and is forecast to fall another one percent in 2002.

India, the world's second leading producer of leaf tobacco behind China, is forecast to grow nearly 635,500 metric tons of tobacco in 2002, up over 8 percent from last year. Much of this increase is due to the ending of the crop holiday in Anhra Pradesh, India's main flue-cured growing province. Flue-cured tobacco accounts for about 25 percent of India's leaf crop, is expected to reach 155,000 tons, a nearly three-fold increase from the previous year. Much of the remaining leaf grown in India is dark air-cured and sun-cured type tobaccos.

U.S. leaf production is showing signs of stabilizing after declining considerably over the last few years. In 2001, U.S. leaf output was up marginally due to favorable weather conditions in many of the growing areas, and due to a slight increase in the effective quota for flue-cured tobacco. For 2002, total leaf production is forecast at 418,430 metric tons, down from 449,745 tons in 2001. Production of flue-cured and burley tobacco, which combined account for 96 percent of the U.S. leaf output, is forecast to reach 246,300 and 156,035 tons, respectively.

Leaf production in the European Union is expected to decline slightly in 2002. The EU's major producers, Italy, Greece, and Spain, are expected to meet their respective tobacco production quotas. French leaf output is projected to decrease 2 percent, while production in Germany is forecast to increase nearly 3 percent.

Consumption

The world's leading leaf consuming nations are China, the United States, India, Russia, Germany, and Japan. Domestic consumption is representative of the level of tobacco product manufacturing (particularly cigarettes) in a given country. China's leaf consumption in 2002 is forecast to reach 2.63

million tons, up 31,965 tons from 2001. China's use of foreign leaf is expected to reach 59,580 tons this year, compared to 56,686 tons in 2001. China is reportedly buying more foreign tobacco in order to improve the quality of domestic cigarette brands.

India's domestic leaf consumption is expected to reach 476,130 tons in 2002, up slightly from the previous year. Last year was a difficult year for the Indian tobacco industry because of the crop restriction in the main flue-cured province of Andhra Pradesh. India's cigarette sales both domestically and abroad dropped in 2001. However, leaf use is expected to increase this year on account of more leaf being available and a 16-percent increase in cigarette exports.

Japan's leaf consumption is projected to drop this year due to a growing anti-smoking movement. Leaf use in 2002 is forecast to total 60,500 tons, down 4 percent from the previous year. Leaf consumption in 2001 fell by nearly 11 percent from 2000.

Turkey's leaf consumption is projected up almost 4 percent this year. For 2002, the consumption of flue-cured and burley tobaccos is expected to increase 8 percent and 5 percent, respectively, while the consumption of oriental leaf is forecast to remain constant. Consumer demand is shifting from an oriental type cigarette to blended brands.

Exports

While several of the world's top leaf exporting nations are likely to show gains in 2002, global leaf exports are forecast to fall on account of a lower leaf production in many areas and a stagnant global demand for tobacco products. The world's leading exporting nations are Brazil, the United States, Zimbabwe, China, and India.

U.S. leaf exports were up 3 percent in 2001 due in part to greater production levels, particularly flue-cured tobacco. Much of the increase in leaf shipments was to the European Union, particularly Germany and Belgium/Luxembourg. Exports to the EU rose nearly 12 percent in 2001 and reached 98,000 tons. For 2002, leaf exports are again expected to show a slight increase. However, competitive world leaf prices, aggressive global anti-smoking campaigns, and ample global leaf stocks continue to dampen U.S. leaf sales abroad.

Zimbabwe is the third largest world leaf exporter, but continues to experience economic hardship and uncertainty over land ownership. Sources expect that global leaf companies will begin sourcing more tobacco from Brazil to compensate for the declining output trend seen in Zimbabwe. Brazilian leaf exports in 2001 reached 354,900 tons, up nearly 4 percent from 2000, despite a 4-percent reduction in leaf output.

China has become one of the world's top leaf exporters with flue-cured accounting for about 96 percent of this trade. In recent years China has begun to aggressively develop export markets as a way to keep

domestic stocks in check. In addition, the Chinese industry is focusing more on improving leaf quality rather than quantity that may help them further to expand exports. China's flue-cured exports in 2001 were 134,055 tons, up nearly 24 percent from the previous year. Exports in 2002 are forecast to decline 15 percent and reach 119,000 tons.

Imports

The Russian Federation, Germany, the United States, the United Kingdom, Japan and the Netherlands are the world's leading unmanufactured tobacco importing nations. World imports are forecast to show a slight gain in 2002 as several importing nations rebuild stocks that have been drawn down over the last several years.

The Russian tobacco industry depends heavily on imported leaf. Russia's leaf imports are forecast to total 307,500 tons, unchanged from 2001. More than half of Russia's leaf imports are sourced from China, Brazil, India, Kyrgyzstan, the U.S. and Moldova. Despite the small domestic crop, the high level of leaf imports has enabled the Russian cigarette industry to grow over the last 5 years. This has kept foreign brands from capturing a larger share of the domestic market.

Germany's leaf imports in 2002 are forecast to reach 257,000 tons, compared to 247,066 tons last year. Imports from the U.S. are forecast to decrease in 2002 as importers look for more competitively priced leaf. Increased purchases from Brazil will likely compensate for lower purchases of U.S. flue-cured. Other non-EU suppliers to the German market include Malawi, Turkey and Indonesia.

U.S. leaf imports (general imports) reached 254,366 tons in 2001, up nearly 29 percent from the previous year. Flue-cured, burley, and oriental tobacco combined account for nearly 70 percent of U.S. leaf imports. In 2001, imports of flue-cured tobacco totaled 55,211 tons, and valued \$175.6 million, while burley imports reached 57,572 tons valued at \$174.7 million. Imports of oriental tobacco reached 62,778 tons in 2001, and valued \$253.2 million. When combined, oriental, flue-cured and burley tobaccos are the principle leaf types used in the American-blend cigarette. For 2002, U.S. general leaf imports are forecast to reach nearly 270,000 tons.

Japan is becoming more dependent on foreign leaf as domestic production declines. Leaf imports for 2002 are estimated at 91,000 tons, down almost 2 percent. For 2002, imports from the United States are expected to drop slightly, although the U.S. accounts for nearly 41 percent of the Japanese leaf import market. Other suppliers include Brazil, Zimbabwe, Malawi, the EU, and China.

Stocks

World unmanufactured tobacco stocks are projected to decline over 25 percent in 2002. Much of this fall can be attributed to lower output by many of the world's top leaf producers in an effort to bring stocks more in line with demand. A majority of the world's leaf stocks are held in China, the United States, Turkey, Brazil and Japan. China accounts for nearly 34 percent of the world's leaf stocks and is expected to lower levels by nearly 32 percent in 2002. Turkey's leaf stocks are forecast to be lower in 2002 as a combination of production controls, exports and stock disposal policies have had some affect.

Japanese stocks have been trending lower on account of declining production and import levels. Stocks in the United States have declined over the last few years on account of lower production levels and efforts by the industry to bring supplies more in line with demand.
